1. Executive Summary

1.1 Purpose and Scope

The purpose of the 10 year plan is to set out:

- ► the strategic and local context in which the capital programme and school organisation operates in Essex
- ► the demand for school places in the next 10 years (from academic year 17/18 to academic year 26/27) for each of the Districts and the authority's plans to address this demand
- ▶ solutions already in the pipeline for each of the Districts that will meet some of this demand
- ► options for addressing future demand

The scope of the 10 year plan is mainstream education provision in Essex County. SEND, Early years, 6th form and other forms of educational provision are not the scope of this plan. The span of the plan aims to encourage strategic investment solutions and more efficient and sustainable choices on how capital funding is allocated.

This plan is based on summer 2016 forecasts. It will be updated annually to take into account the annual summer forecasts, the Capital budget setting cycle and on-going demand and potential options and solutions on a 10-year rolling basis.

1.2 Demand for School Places

The significant pressure on pupil places in Essex is predicted to continue. There are currently 451 primary and 79 secondary schools in Essex (August 2016), including a Studio School and a University Technical College. The total primary capacity is 120,573 places and the total secondary capacity is 95,419 places. At the January 2016 school census there were 112,985 primary aged children and 84,230 secondary aged children on roll. This is an increase of 2,344 and 241 respectively. The number of pupils attending Good or Outstanding schools in Essex is increasing. Although the above figures relating to estate capacity with pupil numbers pointing to a surplus in terms of capacity, in reality this is not the case as the available capacity does not always correlate to areas of high demand such as high density, urban areas.

1.3 School Organisation

For the purposes of planning for school places, ECC organises the schools in quadrants, districts and planning groups. The quadrants and districts are listed on the following table.

| Mid | North East |
|---|-----------------------------------|
| Braintree, Chelmsford, Maldon | Colchester, Tendring |
| South | West |
| Basildon, Brentwood, Castle Point, Rochford | Epping Forest, Harlow, Uttlesford |

The Planning Groups are set out in detail in the Strategic Reviews that follow. Planning groups also provide the basis for the annual DfE School Capacity (SCAP) return that determines the level of grant funding the Council is allocated. To meet the predicted demand over the period of the 10 year

plan (including the pupil numbers resulting from new housing), Strategic Area Reviews have been undertaken. They set out forecasts for the Districts and proposals / options to address any deficit.

1.4 Areas of growth and additional places planned

Over the next 10 years the Authority or Free School providers will need to facilitate the infrastructure that will see 15,267 additional primary pupil places added in the Education Estate. For secondary schools the number of places that will need to be created to meet forecasts is 13,620.

The table below shows the estimated Reception and Year 7 places that need to be delivered over the life of this plan.

| | | Addition | al Places Requi | ired Over the Pla | n Period |
|-------|---------------|-----------|-----------------|-------------------|----------|
| | | Prim | nary | Seco | ndary |
| | | Reception | Total | Year 7 | Total |
| H | Braintree | 45 | 315 | 75 | 375 |
| E | Chelmsford | 222 | 1554 | 365 | 1825 |
| | Maldon | 17 | 119 | 83 | 415 |
| | Colchester | 297 | 2079 | 554 | 2770 |
| Ν | Tendring | 251 | 1757 | 378 | 1890 |
| • | Basildon | 400 | 2800 | 192 | 960 |
| South | Brentwood | 303 | 2121 | 170 | 850 |
| So | Castle Point | 52 | 364 | 60 | 300 |
| •, | Rochford | 53 | 371 | 117 | 585 |
| št | Epping Forest | 122 | 854 | 159 | 795 |
| West | Harlow | 154 | 1078 | 327 | 1635 |
| 5 | Uttlesford | 265 | 1855 | 244 | 1220 |
| | Total | 2181 | 15267 | 2724 | 13620 |

It is clear from the above table that the key areas of growth in terms of pupil places in the next 10 years are Chelmsford, Colchester, Tendring, Basildon, Brentwood and Uttlesford. Although each of those districts has its specific challenges, there are also certain similarities. For example, popularity of schools and pupil migration, timing of housing and school place delivery as well as planning groups that combine rural and urban areas.

1.5 Financing School Place Delivery

ECC uses a mixture of funding sources to finance additional school places. Funding sources available include basic need grant from central government, S106 and CIL contributions, Free School EFA funding, and contributions from schools. New school places must be funded through these means, as ECC has no other grants/funds dedicated to providing school places.

The Capital Programme is published annually and can be found via this link:

<u>https://www.essex.gov.uk/Your-Council/Council-</u> <u>Spending/Documents/Revenue_budget_and_capital_programme.pdf.</u>

1.6 Assumptions underpinning the 10 year plan

Apart from various financial assumptions that underpin the proposed solutions presented in this 10year plan, there are some that relate to use and presentation of data. For example, proposed solutions are based on, and presented as, forecasted pupil numbers at Reception for primary schools and at year 7 for secondary schools. In addition, school pace deficit includes housing projections in all cases. As such, planned and proposed solutions seek to address the deficit resulting from planned housing growth in the Districts.

1.7 Conclusion and Next steps

One of the key draw-backs in a 10 year plan is that the degree of confidence in the accuracy of forecasts decreases with the increased time span. This is proposed to be managed through a consistent forecasting methodology, annual reviews to be able to observe year on year changes and exploration of several options.

Despite these drawbacks, it is nevertheless important to attempt a more strategic view of demand for school places and any solutions, so that in turn more strategic investment decisions can be made.

It is proposed that this plan is shared with Members, Schools and Districts to encourage openness and co-operation around the challenges we jointly face.

2. Introduction: How ECC plans for mainstream school places

2.1 The statutory duty and funding available

Essex County Council has a statutory duty to ensure there are sufficient school places for children between 4 and 16 years old. This duty links directly to two of the outcomes in ECC's Corporate Outcomes Framework for 2014-2018:

- Children in Essex get the best start in life;
- People have aspirations and achieve their ambitions through education, training and lifelonglearning.

To discharge this responsibility, school organisation changes are commissioned in response to forecast data that predicts the level of need for school places. These school organisation changes include building new schools, expansion of existing schools, closure of schools, or reducing the intake at a school.

There are a number of funding sources for delivering school related building projects, including basic need grant from central government, school contributions and S106 or CIL contributions. All of this needs to be coordinated through the council's Capital Programme, and therefore a long term plan for ensuring sufficient school places is required to enable capital (and revenue) financing to be secured.

The ten year plan will undergo an annual revision in the autumn, following the annual School Capacity Return (SCAP Return) to the DfE completed by all local authorities, which is the basis on which basic need grants are calculated. Endorsement for the plan will be sought from the Capital Programme Members Board upon each revision, to enable a dynamic response to the growth in demand for school places, ensuring that every child in Essex has a place to go to school.

2.2 Schools in Essex

There are 451 primary and 79 secondary schools in Essex, including academies (August 2016).

While there are a number of large and growing population centres in Essex, much of the county is rural, and this is reflected in a large number of rural communities and small rural village schools. There is a fairly general pattern of growing demand for school places in and around the towns and city, with stable or falling demand for school places in rural areas.

Essex borders a number of other counties as well as London boroughs with some specific high levels of cross-border interactions that have a significant impact on planning for school places.

2.3 Forecasting methodology

Primary School forecasts are prepared using information on historical trends in admissions, current numbers on roll, the historic birth rate and current GP registrations in schools' admissions areas. Numbers on roll are taken from the School Census pupil counts at May. The number of births and numbers of children in other age groups are obtained from GP registrations as collected from Essex Health Authorities and sorted into school admissions areas. Admissions factors are calculated as the percentage of admissions compared with the overall number of children in the admissions area. An average admissions factor, generally taken over the past three years, is then applied to GP registration numbers for the 0 to 3 year olds in the admissions area to predict future intakes to the Reception year. This is done at school level, forecast planning group level and district level

Pupil forecasts for secondary schools are constructed using current numbers on roll and historic trends in admissions from Year 6 in primary schools. Numbers on roll are taken from the School Census pupil counts at January. Admissions factors are calculated as the percentage of Year 7 admissions into the secondary school compared to the number in Year 6 the previous academic year in the 'feeder' primary schools; (for forecasting purposes, feeder primaries are those schools where a significant proportion of pupils normally transfer to the particular secondary school). An average admissions factor, usually over 3 years, is then applied to the total in each year group of pupils attending the feeder primary schools to provide Year 7 forecasts. This is done at school level and at district level and for some forecast planning groups.

Further adjustments are made for both primary and secondary schools to take into account peculiarities in admissions, school popularity, etc.

For schools with sixth forms, two further admissions factors are calculated using historical information comparing the number of pupils in Year 11 staying on to Year 12 and likewise from Year 12 to Year 13. Average sixth form admission factors are then applied to pupil numbers in Year 11 or Year 12 to forecast future sixth form numbers.

2.4 New housing element of forecasts

The housing trajectory figures published by the Local Planning Authorities in their Annual Housing Monitoring Reports are used to inform the estimated phasing of housing developments. It must be recognised, however, that the actual developments and the rate at which new houses are built depends on a mixture of economic and social factors. House builders may prove unwilling to develop all the sites identified and may likewise apply for permission to construct dwellings on alternative pieces of land.

A detailed database of all housing developments planned within schools' catchment areas has been built up by the Data & Intelligence team and is used to estimate the mix of houses and flats in a development. Together with the housing trajectory figures, these are used to generate projections of new housing by catchment area.

The likely number of pupils that will move into a development and require an additional place at the local school is calculated using factors for houses and flats. These are multiplied by the forecast number of new dwellings to estimate the number of pupils that will be produced by a particular development overall. One bedroomed units and certain other types of dwellings that are unlikely to house children are discounted from the calculation. The factors currently used are for primary pupils

Page | 5

0.3 additional pupils per new house and 0.15 additional pupils per new flat and for secondary pupils 0.2 additional pupils per new house and 0.1 additional pupils per new flat. Finally, the gradual buildup of pupils from new housing over a number of years is modelled through additional factors that produce a staggered effect rather than the full pupil product being added in from the first year new housing is occupied. For new garden settlements (several of which are planned for Essex), the number of pupils from new housing is likely to be higher than indicated above, and new factors will be developed when modelling growth and pupil numbers for new garden settlements.

The additional pupils that have been forecast from new housing are added in to schools' forecasts. In effect, where it is considered that schools are likely to be affected by housing developments, the forecasts show a range of possibilities for pupil numbers, from the baseline projection of historical trend data to a potential maximum including the adjustment for new housing.

2.5 Academies and Free Schools

Currently (December 2016) there are 209 academies in Essex, with 14 academy orders issued. The council has a strong process in place to support the academy conversion process, which is primarily a legal function.

Free Schools were typically a method for groups of parents or other parties to set up a school that would provide diversity in the school system, often in response to a lack of curriculum choice or existing low standards. Over recent years the Free Schools programme has changed. Not only are all new schools proposed by local authorities considered Free Schools (this has no practical impact on opening a new school, which have been required to be academies for some time), but Free Schools are now being proposed by multi-academy trusts and other groups, in response to basic need.

Free Schools that are not invited to bid by the local authority are funded by the Education Funding Agency (EFA). Where Free Schools meet a basic need this will reflected in the annual School Capacity Return, which in turn will reduce future basic need grant from the government.

The Free Schools Programme provides an opportunity for ECC to build on a strong collaborative working relationship with the RSC and multi-academy trusts working in Essex. This will enable ECC to continue to ensure sufficient school places (particularly where expansion of academies is required to provide the correct solution), even if/when no schools are under its control.

2.6 Commissioning School places: the guiding principles

In its role as Commissioner of school places in Essex, the County Council compiles the Commissioning School Places in Essex document (<u>http://www.essex.gov.uk/Education-Schools/Delivering-Education-Essex/School-Organisation-Planning/Pages/Essex-School-Organisation-Plan.aspx</u>), annually. It provides:

- Information on the current organisation of school places, and the existing capacities and number of pupils attending those schools.
- Information about the size of existing school sites and opportunities that may exist for further expansion where required to meet housing demands.
- ► Forecasts of future pupil numbers, and how any increases might be accommodated, or how any surpluses could be addressed.

The options and solutions to meet identified deficit in each of the Districts in this 10 year plan are a result of option appraisals to inform school place planning and infrastructure. The Education Estates Strategy guiding principles are applied as agreed by Cabinet in October 2014.

Some of the criteria, are:

- Location of need and demography;
- Current provision across all providers in the area, including free schools and academies;
- Minimising the need for and reducing the reliance on Council funded statutory transport provision;
- Potential new housing development and developer contributions
- Implications of the local plan;
- Admissions patterns (parental preference/popularity);
- The governance and leadership capacity of a school
- Suitability of school site for expansion through viability studies. BB103 is used as a guiding principle with regard to minimum areas for primary schools (1FE=0.94ha, 2FE = 1.66ha, 3FE = 2.39 Ha)
- Suitability of ECC owned sites for new school provision within the area of growth;
- ► Site searches for additional land to increase school provision

When planning additional school places every opportunity is taken to identify cost effective solutions to increase provision which allow more parents to send their child to their preferred school and support schools to increase the educational achievement and life chances of all young people.

There are a number of factors that influence strategic thinking and basic need solutions outlined in this 10 year plan. These are kept under regular review and changes to the plan will be reflected annually as part of a rolling programme. The factors are:

- ► Fluctuation in forecast pupil numbers;
- Statutory consultation and ECC governance and approval processes;
- ► Finalisation of District and Borough Local Housing Plans (many of which are currently out to consultation);
- Phasing and timing of actual housing developments and the timing of availability of sites for new school provision (services, access, infrastructure);
- ► Free Schools established outside of basic need requirement;
- Changing patterns of growth in mid-year migration;
- Academies adjusting their Published Admission Numbers or capacities;
- Cross border migration patterns and delivery solutions;
- ► Project feasibility, including Planning
- Sponsor availability of the right quality and acceptability to DfE;

2.7 New Housing, Section 106, and Community Infrastructure Levy

School place planning for growth from new housing has become more challenging following the abolition of the East of England Plan in January 2013 and changes to national planning policy. The 12 borough/district/city councils that act as the local planning authorities for new housing within Essex are, under the terms of the new National Planning Policy Framework (NPFF), required within their local plans to identify specific deliverable sites for the first five years of those plans that are

Page | 7

ready for housing development. In addition they are required to identify specific developable sites for new housing for years 6-10 to enable the five year supply of housing land to be topped up. Essex County Council continues to comment on the likely impact of new housing allocations on school places in the 12 emerging new Local Plans currently being prepared to comply with the NPPF, all of which are at various stages in the process but none have yet been adopted.

A number of the local planning authorities still do not have the requisite five year supply of housing land in place in their draft local plans. This has resulted in a number of housing developers submitting speculative planning applications for sites that have not been identified by the councils as being suitable for sustainable development in accordance with the NPPF. When such planning applications are refused, some developers are appealing these decisions and have a strong chance of a successful appeal where it can be demonstrated that the council concerned does not have the requisite five year supply of housing land in place.

This can result in housing developments being granted planning permission in areas where there is an insufficient surplus of school places to accommodate the pupil product from the development and the development is of insufficient scale to generate a developer contribution that is sufficient to fund a new school or the expansion of an existing school. This could be particularly problematic in those areas where there isn't the site capacity to expand an existing school. It also presents the problem of having insufficient time to provide school places for the pupil product of the new housing.

When the number of pupils generated by new housing is greater than the surplus capacity available in permanent accommodation in schools that might accommodate pupils from the new development, a contribution is sought from the developer via a Section 106 agreement. This contribution can be in the form of additional land and/or a financial contribution for the replacement of temporary accommodation, the expansion of an existing school or the provision of a new school in the area of growth under the terms of the S106 agreement. It is up to local planning authorities to decide whether to support such requests and they are under a duty to balance all the requests, made by different infrastructure providers, against the viability of the development. In April 2015, the Community Infrastructure Levy (CIL) regulations were brought into force. These regulations restrict the number of s106 planning obligations that a council can consider to five per infrastructure project.

The Community Infrastructure Levy itself allows a local planning authority to introduce a charge on development to fund infrastructure that is not being delivered through s106. There is currently no legal requirement for councils to introduce CIL. If councils choose to set a CIL they must set out the level of development planned in their area and the cost of the infrastructure required to support it. They must also consult the public and set out in a list the type of infrastructure or individual projects they will use the CIL to fund. This list may include the provision of additional school places.

Of the 12 district councils in Essex only Chelmsford City Council has, to date, adopted a Community Infrastructure Levy (CIL). Maldon has submitted their CIL to the Planning Inspectorate and is awaiting a decision on their Local Plan before the CIL can be progressed. Brentwood have recently consulted on a draft charging schedule but have yet to submit the prerequisite Local Plan for examination. Other councils are considering implementing CILs but it is not thought that all 12 Essex local planning authorities will adopt a charge. Councils that do not to adopt a CIL will need to rely upon Section 106 agreements from larger sites to fund the infrastructure projects required to support new development in their areas.

It is anticipated that even those district councils that adopt CIL will continue to use a mixture of CIL and Section 106 agreements to fund infrastructure projects. Section 106 agreements being used for large scale developments with CIL being used for smaller developments.

In future the Local Authority will be competing for the funding accruing from CIL with other infrastructure providers, including the district councils themselves. Whether CIL will provide the same level of funding as S106 agreements is a matter for conjecture. However, it is likely, given the competing demands on a single CIL pot, that funding may not become available to ECC in the same volume and as quickly as has been the case with the funding from Section 106 agreements.

Phasing and timelines for potential new housing developments are being closely monitored and viability reports have been commissioned for the delivery of a number of new schools associated with new housing. Plans are being progressed with developers to ensure that new provision can be provided at the earliest opportunity following commencement of housing development where there is insufficient capacity within existing school provision to accommodate pupils from the earliest phasing of housing.

Delivery of the new provisions (which could be a new Free School or a split site school) will be dependent on confirmation of timing and phasing of housing by the developer, planning permissions and the timescale for delivery of necessary infrastructure to serve the new school provision, including services and access to the new school sites.

2.8 Home to School Transport

The Local Authority is required to provide transport to the nearest school to a child's home address where the child lives 2 miles or more away below the age of 8 and 3 miles or more away at age 8 and over. At secondary school age for families on low income, transport is also provided to any one of the three nearest schools between 2 and 6 miles. Where, having applied for a place, the nearest school(s) are full the Local Authority is required to provide transport to the next nearest school with space if the distance criteria is met.

The Home to School Transport Budget comprises an un-ring-fenced grant and a contribution from Dedicated Schools Grant. This budget is under constant pressure. In considering the strategic solution for the supply of school places in an area the potential transport implications are a key factor in determining the location of potential solutions when assessed against the areas of demand. Where solutions do not address a local need and transport has to be provided the Local Authority would be faced with meeting the cost of the transport in perpetuity. This is an important element in considering the cost benefit of a solution.
